INSULATION BLANKETS

DESCRIPTION

CALVOSEALING's removable insulation blankets are custom designed and fabricated for each individual item. Close contour fit is essential for a neat appearance and proper sound and thermal performance. Multiple piece construction is frequently required for most applications.

Insulation blankets will keep your utility bill in check while increasing safety, reliability and productivity. Removable insulation blankets reduce heat loss and thereby save money otherwise spent on energy. The savings are realized not because removable blankets perform better than conventional insulation. Rather, they offer savings over conventional applications because they require fewer labour hours to remove and reinstall.

To fit your needs, our custom blankets are made using a wide variety of cloths, insulation materials and closure systems, which can handle temperatures up to 1260 ºC (2300 °F). All removable insulation blankets will be fabricated in house from design drawings or field measurements.

ADVANTAGES

- Energy conservation
- Personal protection
- Freeze protection
- Fire protection
- Reduced plant temperatures
- Less labour hours
- Noise-control
- Temperature retention

APPLICATIONS

- Removable blankets
- Pipe wrapping
- Insulators
- Boilers heads
- Manhole
- Heat exchangers
- Valve and pump covers
- Steam and gas turbines
- Diesel exhaust systems
- Instrument covers
- Extrusion

SOME APPLICATIONS

Exhaust pipe on boat (Shipbuilding)

Turbine insulation (Power Station)

Ventilator

Valve insulation system (Petrochemical)
